

KNOCK OUT THE NUISANCE

When larval fly populations aren't controlled early, adult flies become a problem. Fly infestations represent serious health and environmental hazards, as well as inconvenience and frustration to neighbors and communities. So don't risk it. Use OXYFLY®.

OXYFLY is a broad-spectrum insecticide that offers superior knockdown anywhere adult flies are a problem.

Benefits of using OXYFLY:

- Spray can be used in horse stables, poultry units, pig fattening and pig breeding units, beef and dairy and calf production
- Fast knockdown, odor-free, low toxicity and long residual activity
- Controls flies as well as a wide spectrum of other insect pests, including fleas, ticks, litter beetles and cockroaches
- Water-based capsule suspension technology makes for convenience and ease-of-use anywhere adult flies are a problem

How to use OXYFLY:

- OXYFLY is a micro-encapsulated formulation adulticide for the spray-on or paint-on control of nuisance flies and other insects in animal housing
- OXYFLY's concentrated formulation makes it easy to use in larger operations
- Apply directly onto surfaces where flies are present, including walls, posts, scraping equipment and litter

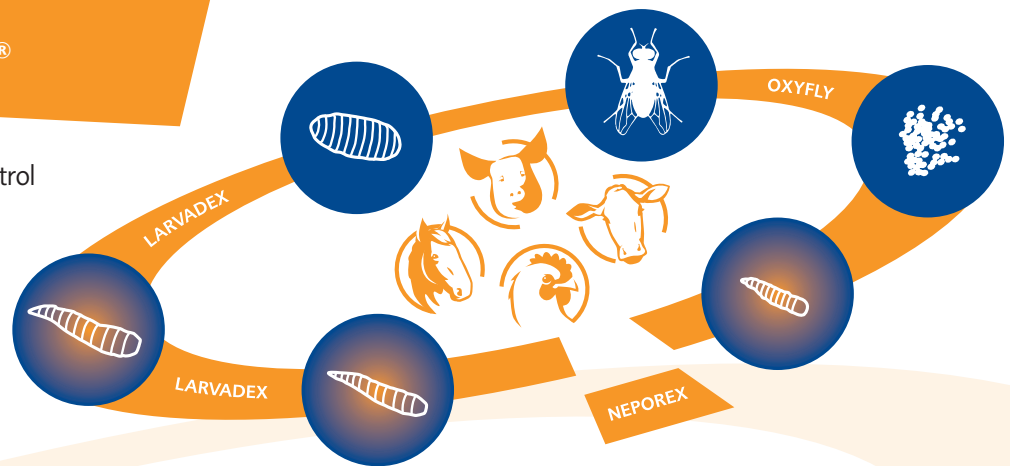

OXYFLY® is a key component of the Fly Control Program, part of Novartis Animal Health's Farm Hygiene Program.

EFFECTIVE FLY CONTROL IS INTEGRATED FLY CONTROL

NEPOREX®

- Multi-species larvae control
- Scatter or spray

LARVADEX™

- Convenient, in-feed or spray application larvae control for poultry
- Saves time and labor. No need for manual treatment of large areas of manure – simply add in food or spray

OXYFLY®

- Superior knockdown of adult flies
- Broad-spectrum insect control
- Use anywhere adult flies are a problem

NEPOREX and LARVADEX stop fly larvae from developing into flies. OXYFLY stops adult flies dead in their tracks.

NEPOREX, LARVADEX and OXYFLY are key components of the Fly Control Program, part of Novartis Animal Health's Farm Hygiene Program.

Always read and follow label directions.
